Winning Characteristics in the Olympics

Noah Obuya and Tamya Davidson

Brainstorm

What variable in our model is most influential (or most accurately) able to predict someone winning a gold medal?

What country has won the most gold medals?

If someone doesn't win a gold medal, are they more likely to win a silver or bronze medal?

Do men or women win more gold medals , and are the influential variables the same for them?

Are countries with warmer climates more prone to winning a gold medal during the summer olympics? Would have to find some data classifying a country as a warm country.
